How Parlay Probability Compares

The services sports bettors use most, side by side. Green check: offered. Red X: not found on the company's public website.

Checked against each company's public website and pricing page on October 16, 2026; prices are as published (OddsShopper from an earlier review) and may have changed. A red X means the feature was not found on public pages, not that it cannot exist behind a login. "Estimated fair price on one-sided props" = a modeled fair probability for a prop number the book posts only one side of; no competitor was found offering this on public pages (Unabated's alternate-line calculators cover game lines; Betstamp describes prop and ladder pricing as a service for sportsbook operators). Parlay Probability's mobile app is an installable web app. Parlay Probability offers an expected-value calculator and a hedge calculator (the equal-profit stake split an arbitrage calculator uses), not market-scanning +EV or arbitrage finders, and offers no picks by design.
